**Origin and BSE/TSE Statements:**

The aforementioned lot was manufactured from fetal bovine blood collected from government approved harvest facilities located in Brazil, a country recognized by the United States Department of Agriculture - Animal and Plant Health Inspection Service (USDA-APHIS) and the World Organization for Animal Health (OIE) as having a negligible risk of Bovine Spongiform Encephalopathy (BSE), a bovine-specific Transmissible Spongiform Encephalopathy (TSE). All fetal bovine serum is derived from fetuses collected from healthy bovine cows and heifers that have passed ante and post mortem inspection and were found free of contagious diseases. This material was exported from Brazil accompanied by a Veterinary Health certificate. Once inside the European Union, the material was inspected at the Boarder Inspection Post and released by the issuance of a Community Veterinary Entry Document ensuring that the collection facility and the importer are both cleared as suitable exporters and importers within the EU Traceability system.

The following signatures indicate the above material has met all quality specifications and has been reviewed by a Quality representative.
