Plug & Play™ Systems

Features and Benefits

Universal wired modular system components

Enable moves, adds, and changes (MACs) without polarity concerns; provides a simple migration path between two-fibre and parallel optics applications

Standard and low-loss components

Provide means of meeting increasingly stringent network performance requirements

Corning® ClearCurve® OM3 and OM4 fibre offers enhanced bend performance

Allows tighter cable routing without negatively impacting system performance

100G-ready performance

Ensures product will meet the requirements of 100G Ethernet applications

Parallel optics tested to a maximum skew of 0.75 nanoseconds

Ensures operation in high-data-rate Ethernet and InfiniBand applications

MTP® PRO Connector and Push-Pull Boot

Allows for pinning and polarity change in the field while enabling easier mating and unmating in extremely dense applications

Reduced furcation size

Eliminates preferential bend issues commonly associated with ribbon cables and furcation legs

Optical Distribution Frames

The Corning Four-Post Rack provides a platform to support high-density fibre management systems. The platform can be deployed in data centre, central office, and headend applications.

The rack is based on a robust steel Triple-U rail system that provides exceptional strength for an installed equipment load of up to 1,360 kg when mounted using cage nuts and centrally located in the rack front to rear. This load rating makes it suitable for a wide variety of applications supporting both passive optical patch panels as well as the heaviest of switching equipment.

The modular approach of the Corning Four-Post Rack allows for accessories such as cable managers and patch cord managers as well as doors and side panels to be added as applications require.

Features and Benefits

Modular construction

Frame can be quickly assembled by a single installer. Easily scalable to dual- or multi-frame configurations.

Accessories such as patch cord management, cable manager, doors and side panels available

Scalable to any application at point of installation or in the future.

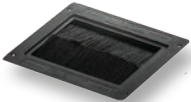

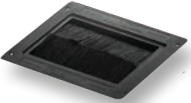

EIA 310 compliant

Compliant for global use.

EDGE-HM-03U	Rack Accessory, EDGE Horizontal Patch Cord Manager, 3U	
EDGE-BRP-01U-DB	EDGE Blank Rack Panel, black, 1U	

Pretium™ Connector Housings (PCH)

The rack-mountable PCH housings are available in 1U, 2U, and 4U sizes and mount in 19-in racks or cabinets. Combined with the modules, panels, harnesses, trunks, and patch cords, they provide a tip-to-tip solution for your fibre optic network.

Plug & Play™ Trunks

Plug & Play™ trunk connections are available in fibre counts of 12 to 144 fibres with MTP® connectors on both ends, or terminated with MTP connectors on one end of the trunk and single or dual fibre connectors on the other end for applications requiring one end of the trunk to connect directly into system equipment or patch panels. Using the MTP connector, a 12-fibre push-pull optical connector with a footprint similar to the SC simplex connector, high density and rapid deployment with space savings and minimal error can be realised.

The MTP connector, used in conjunction with high-density loose tube cable provides a space-saving of up to 45% and three times the fibre-tray capacity over traditional bulkier cabling solutions. Cable tray weight and cooling air impediment are minimised. Optional brackets are available for mounting the furcation points into equipment racks and cabinets.

MTP® PRO Trunks

Plug & Play™ MTP® PRO trunks provide the backbone of the Plug & Play structured cabling. With MTP PRO connectors with push-pull boot on both ends of the cable, these trunks are designed to interface with the Plug & Play modules.

MTP PRO connectors with push-pull boot enable a simple one-step, colour-coded polarity change without the need to remove the the connector housing along with the capability for field-friendly pin changes while allowing easy mating and unmating connections in extremely dense applications.

1-3	-	22 cm	32 cm	42 cm	52 cm
4-6	-	-	22 cm	32 cm	42 cm
7-9	-	-	-	22 cm	32 cm
10-12	-	-	-	-	22 cm

MTP® PRO Patch Cords

MTP® PRO patch cords allow for the seamless migration to higher data rates for multimode systems in the data centre when used in conjunction with our universal trunks. The patch cords are based around pinned or non-pinned 12-fibre MTP connectors. Pictured here are the most common applications for this type of patch cord to make ordering easier.

The MTP assemblies have the same connector size and cable footprint as duplex LC patch cords used today. The density, airflow, and cable management advantages are preserved as you migrate to higher data rates.

MTP PRO connectors with push-pull boot enable a simple one-step, colour-coded polarity change without the need to remove the the connector housing along with the capability for field-friendly pin changes while allowing easy mating and unmating connections in extremely dense applications.

Plug & Play™ Harnesses

A harness is an ultra-slim 12-fibre (2.0 mm) pre-terminated fibre cable with an MTP® PRO connector with push-pull boot on one end and 12 simplex LC/SC or six duplex LC/SC connectors on the other end. The majority of the harness is a single cable which breaks out into six or 12 legs to enable connectivity to the switch ports.

Advanced optical harnesses with high-fibre-count MTP PRO connectors are designed to enable parallel optic conversion for 40 and 100G applications.

MTP PRO connectors with push-pull boot enable a simple one-step, colour-coded polarity change without the need to remove the the connector housing along with the capability for field-friendly pin changes while allowing easy mating and unmating connections in extremely dense applications.

Plug & Play™ Modules

Plug & Play™ universal systems modules are used to break out the 12-fibre MTP® connectors on trunk cables into LC or SC duplex connectors to facilitate patching into system equipment ports, patch panels, or work area outlets. LC duplex adapters feature hinged VFL-compatible shutters that move up and out of the way when the connector is inserted. Specially designed indents in the shutters ensure that the end faces of the connectors are never touched. These shutters replace the standard dust caps that typically, once removed, are never replaced, exposing the interior end faces to dust particles and possible damage.

MTP® Adapter Panels

Plug & Play™ MTP adapter panels are used in applications where the pre-terminated cables are routed directly from the equipment to the piece of interconnect hardware. This provides an efficient way to securely mate two or more connectors: They are a simple interface to connect trunk harnesses to trunks, standard trunks to extender trunks, or can facilitate the use of 40G electronics.

Duplex Patch Cords

Corning offers the most comprehensive line of connectors and factory-terminated cables, including patch cords to meet or exceed all industry standards for reflectance and insertion loss.

Cable assemblies are a basic component for any network infrastructure projects you may have. Corning's pre-terminated assemblies use only high-quality Corning optical fibres to ensure total performance quality.
